PRONTO Multi-room control solution

OVERVIEW

The Pronto universal touch screen remote control is the first remote that can fully replace all remotes in the home. The touch screen LCD display, together with a flexible PC software program, enables the user to fully integrate, all their infra-red enabling devices into one control panel. Size and labels of buttons can be adapted and codes can be learned from other remotes, creating a single remote that can control any device, regardless of brand.

The Pronto is a new class of programmable touch screen remote control for intuitive operation. Today, the concept has evolved into an integrated control solution for conventional home theatre, multimedia content and lighting. With a combination of infrared control and WiFi® wireless control. Pronto provides true multi-room control.

Sensational design and a breathtaking colour display give the new Pronto instant appeal. The smooth top and flush display is backed by an ergonomic 'soft feel' grip with a stylish metallic finish. Its docking station/charger emits a subtle white glow and during charging a red indicator that reflects on the tabletop.

Feature

- Total home entertainment control
- Intuitive user interface that works in terms of activities rather than pieces of equipment
- Works with every brand and model of equipment and can 'learn' codes not included in its code library
- Best-in-class IR learning and sending performance
- New home control functions - Escient Fireball Media Servers
- Best graphics in the industry
- Ergonomic design with optimized button layout
- Perfect for controlling multi-room installs
- Built-in system diagnostics save time if a problem occurs
