

# Automated Door Systems

## Patio Door ATRIUM Automated Lift /Slide Patio Door

### OVERVIEW

The metal fitting system – with practical night-ventilation-function – developed for wooden, synthetic and metal French windows. Lifts and shifts casement-weights up to 300 kg. The bogies are fitted with cleaning brushes. Guide rails for barrier-free implementations are an available option.

An electric version with different security devices according to DIN 18650 is the ATRIUM HS 300E. Lift and shift-doors guarantee a light-suffused house, contribute to a harmonic facade, enable an obstruction-free crossing from the outside of the house to the inside and stand for operational ease and high stability.
